Needle Scalers

Inline Design, Pistolgrip Design

For needles: Ø 2 - 4 mm (.08 - .15 in)

- for industrial applications
- highly durable
- high power output
- reliable

The needle scalers are used for the removal of welding seams, for de-rusting of steel constructions and containers, for removal of paint and scale, for the cleaning of castings, for the cleaning of facades in construction and for the abrading of concrete.

Needle scalers for the descaling, derusting and for general cleaning jobs

The needle scaler SN 10 is best suited for material removal, de-rusting and for simple cleaning operations. The Model SN 25 is used for semi-heavy operations and the Model SN 30 is for heavy-duty fabrication. The Model SN 23 is used in light- and semi-heavy applications where a pistol grip cannot reach the area that needs to be worked on.

Industrial applications

Our needle scalers are robust tools that are best-suited for the use in industrial areas. For example in construction, shipbuilding, machine building, automotive or on oil platforms.

Highly durable

The robust construction assures the high longevity of the tool, even when used in a 24/7 operation.

High power output

The low vibration and high power assure that the tool will always operate at its highest level of performance.

Reliability

Our air needle scalers correspond to the highest requirements of the industry.
